

Inspiration can come from many different places, but how do you bring your ideas to life?

With Inspire by dri-design, we not only offer a select number of our own inspiring finishes, but deliver you the opportunity to create a finish that is completely unique and driven by your ideas. With Lumiflon finishing, we can provide a plethora of design options using its wide range of gloss and pattern capabilities. This advanced finishing technology can provide highly custom finishes with superior weatherability and durability, without the concern of delamination and bubbling associated with laminated products. Inspire by dri-design offers the long-life durability of aluminum with unique and customizable finishes that are equally suitable for use on interior and exterior applications.

Terra Clay

The look of an aging, patinated material can add character and charm to architecture. However, what if you want a unique patinated look not found in nature that would create that feeling from the moment it was installed? Dri-Design with Terra Clay is a hybrid finish with the warmth of terra cotta and the complexion of patinated zinc. A look that will stand the test of time.

Rusted Bronze

How do you develop a weathered steel look on an aluminum substrate and achieve the distressed, oxidized look without the associated issues? We started with a mature rust color, added a fly spec for movement and finished by optically embossing the design with aged, pearlescent bronze ink. The result is Rusted Bronze, a weathered steel look that will never have to be maintained again.

Black Pearl

Black can read as unmitigated and powerful. On metal panels, however, it can often read as uninviting. So, how can you achieve that elusive formal prestige? Starting with a matte black granite finish, we added a new optically embossed texture using silver pearl ink to achieve that welcoming elegance in our Black Pearl finish. Dri-Design with Black Pearl...simply beautiful!

Quartered Butternut

Discovered by our team at the 2012 Salone de Mobile in Milano, the wood color palate of chic butternut has incredible warmth and distinction that people are drawn to. To create a finish with the beauty of this concept wood tone we started with a rich caramel basecoat, added a pine overlay for movement and depth and finished it with a gold ink for a pop under any kind of lighting.

African Walnut

African Walnut is best known for its beautiful, deep figured grain; sometimes used for the polished wood interior of high end automobiles. With this amazing grain as a basis of design, we added pearlescent inks in copper and bronze to give our finish the same depth and feel as the real wood itself.

Porcelain Granite

We have a visceral, natural reaction to stone's beauty. It gives us a sense of place, but it can be difficult to work with. Our Porcelain Granite finish achieves this timeless feel in an easy to install, aluminum wall panel. With a lumiflon topcoat, this finish has great depth and just the right amount of gloss to give the appearance of polished stone.

Prismatic Grey

Grey metal cladding is a solid choice for a building that wants to fit in. But, what happens when you want a multifaceted mélange of grey in a simple to install system? You choose Dri-Design with Prismatic Grey. This finish echoes the raw color and texture of stone and slate with the subtle elegance of oxidized zinc.

Crystal Penny

Few things are more beautiful than natural, patinated or oxidized metals, but some combinations are even too complex for Mother Nature. Enter Dri-Design Crystal Penny. Stunning steel patinas of orange-red, deep red and mature brown; this neo industrial finish offers a fresh take on an old favorite.
